15 Injection Molding Machines

**Letter from Ronald Poirier – Maintenance Manager**

Before I installed the FiltrOil unit, I was replacing my vain screw motor on my Van Dorn 300T about every 9 months. This was very costly since to repair the motor is about \$4,300 (\$8,200 new) plus the cost for my machine to be down. Since I installed the FiltrOil, about 2 years ago, I have not had any problems with my vain screw motor. **You can't afford not to have FiltrOil on any injection molding machine!** FiltrOil ensures component longevity and eliminates sticky valves. Leaky valves will effect your entire process – dirty valves cause varnish which effects the timing and repeatability and thus your scrap rate. **The bottom line is it pays to have FiltrOil on your injection molding machines!**

Thanks,

Ronald Poirier  
Maintenance Manager
